Career stages

This is the stage before gaining permanent employment and shapes the direction of our professional ambitions.

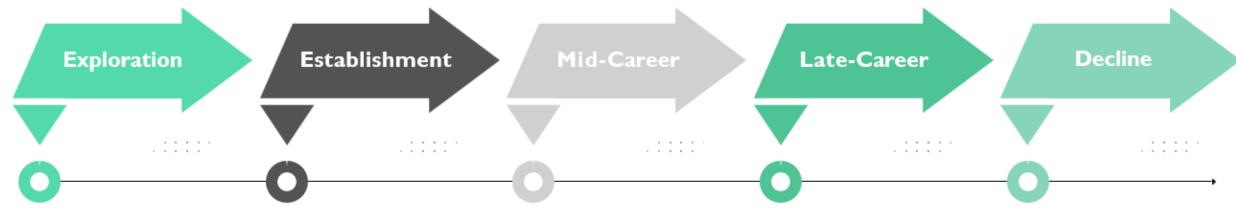

Establishment is the second stage, when we are focused on learning our profession and establishing our place in the workplace.

The third stage is mid-career when we are confident in the workplace, taking on additional roles and very often enjoy promotions.

Late-career is when we are more focused on supporting others' careers, rather than our own. The final stage is decline, when we generally retire from our profession, although we may take on further roles during our retirement.
